

World Reserve System (WRS)

The World's most stable currency

Fees

Draft Version: 0.01.01 (very early stage)

Author: Ramin Assisi, Computer Scientist

Overview

Context	Fee	Description
Transactions	free	We use a DAG with Proof of Work done by the Nodes
Node Class A	Free	This is the Node with the lowest weight. Everyone can download and run them for free. These Nodes do not get any incentives but they take part in the interest calculation by the WRS treasury
Node Class B	1 ETH	These Nodes have the lowest weight for all Nodes with a lending facility. They can be purchased by anyone. Also they will be awarded in an initial phase until the target value of the TRUST-coin has reached. The amount of the rewards will be calculated by the money supply algorithm of the WRS treasury
Node Class C	10 ETH *	These Nodes are reserved for entities that provide lending facilities to customers
Node Class D	N.A.	These Nodes are run by the WRS foundation. They provide additional functionality to the WRS network. Especially when it comes to transactions between the main vault (treasury) and other vaults of the treasury.

*** These Nodes cannot be purchased during the initial phase until the target value has been reached**
